

White paper

New approaches to crypto investments. What will investors get from them?

White paper is a guide that is not aimed at financial, legal, or tax advice to the user. The information in it is purely declarative.

The name CryptoKG in this document can mean both the cryptokg.io cryptocurrency trading platform itself and the CryptoKG project team.

Detailed information on all possible risks of an investor, as well as on the responsibility of the CryptoKG cryptocurrency exchange, can be found in Chapter 9.

Short info

CryptoKG is a young tokenized asset futures platform based in the USA. All rights of CryptoKG are reserved by Legaltant LLC, registered at 111 Northeast 1st Street, 8th Floor, 88364, Miami, FL 33132.

Users have the opportunity not only to trade cryptocurrency, but also to make transactions using tokenized assets. Although the company has been operating for a relatively short period of time, we have been able to attract more than 3,000 new clients, the advantage of which are newcomers to the cryptocurrency trading field.

A futures platform is a platform that allows traders to sell, buy, store, exchange tokenized assets. The principle of operation of any such futures platform does not differ in any way from the principle of operation of offline exchanges. It is the market that determines the value of the currency, regulates the supply and demand curve for coins and tokens. The exchange is only an intermediary.

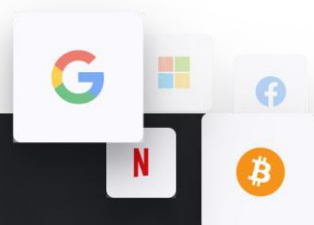

In order to attract as many customers as possible, exchanges can often advertise false information about themselves, providing false liquidity. CryptoKG, in turn, believes that such actions only spoil the reputation of most trading platforms and discourage many users from being involved in the process of trading cryptocurrencies and assets. And this, in the future, is already beginning to be picked up by the mass media, having in their hands evidence of false promises from dishonest firms. We believe that it is necessary to work according to the precepts of trust, openness and transparency. This is what makes it possible to cooperate comfortably.

Other exchanges, even if they do not lie in advertisements, can often neglect security methods on the site, which is why the security of the user's personal data and his funds is not guaranteed in any way. And outdated architectures are not conducive to user satisfaction. We believe that it is necessary to provide users with hybrid mechanisms, and not just a purely decentralized system. Be that as it may, connecting decentralized assets by centralized structures is the way to go.

CryptoKG futures trading platform for cryptocurrencies and tokenized assets is a guarantor of freedom and security for all users who decide to cooperate with us.

1. Exchanges and tokenized assets

CryptoKG is the first absolutely legal exchange for trading tokenized assets that allows you to invest in fiat currencies, cryptocurrencies, various tokens, and exchange-traded assets. Users have the opportunity to trade cryptocurrency and earn cryptocurrency.

Shares and securities have long ceased to be paper-based. Futures contracts, stocks, bonds and options are now assets that can be purchased online electronically. This is how cryptocurrency took securities trading to a new level.

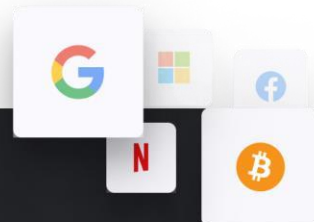

What are tokenized assets?

Tokenized assets are tokens, the value of which is regulated by the value of the underlying assets, the very exchange commodities and securities. In fact, when viewed from the point of view of the result for investors, the price of a token is equal to the price of a share itself, a bond and other instruments.

CryptoKG, being the flagship in the world of tokenized asset trading, plans to provide access to over 10,000 different tokens, the price of which will be fully tied to the value of the current position in the traditional asset market.

Traders will be able to purchase positions of Amazon, Coca-Cola, Dow Jones 30, Nasdaq 100, Brent Crude, gold, silver. And this is just a small part of the entire list of assets.

Trading tokenized assets is the ability to purchase tokens, the price of which varies depending on the market price of the underlying asset. It's just that tokens allow you to access financial markets without converting cryptocurrency into fiat funds. Trading in the markets can be carried out by diversifying the crypto portfolio, without any risks that cannot be avoided when converting currencies.

The use of blockchain technology is the basis for the operation of tokenized exchanges. The blockchain is open and transparent, stores absolutely all information about price levels, and also makes it possible to compare the value of assets that CryptoKG offers with prices that competitors have. Classic exchanges do not provide such a range of services. All working conditions are set out in the most accessible and understandable way for users.

Major problems with exchanges

Modern exchanges for cryptocurrency trading do not give their clients much freedom of choice. The main problem is that many exchanges neglect to provide transparent and regulated financial instruments. To trade, you have to regularly transfer your cryptocurrency to fiat, which is fraught with risks.

Freedom of choice is the thing that makes the client independent. This is the kind of thing that can make cryptocurrency free.

CryptoKG, in turn, makes it easy to switch from cryptocurrency to fiat money. You can invest in and tokenize in stocks, indices, mutual funds, precious metals and commodities.

And you don't need to be a physical owner for that.

The spread of cryptocurrency has given space for the spread of a wide range of problems, which are subject to not only beginners, but also experienced traders. We refer to such problems:

- Possibility of bankruptcy of the site;
- Hacker attacks;
- Fraud of the exchange itself.

For this reason, we recommend that you pay attention to the following points when choosing an exchange:

- Security. The most important factor that determines the use of the exchange as a whole. Eliminating the possibility of theft of funds and personal data is the key to using the exchange correctly.
- The website address should start with https only.
- Two-factor authentication.
- A vault in which all offline deposits will be collected.
- Possibility of funds insurance.
- Access to information about the employees of the exchange, as well as about its management.
- The presence of the address of the company.
- High trading volume.
- Relatively low commission.
- The presence of an impressive number of cryptocurrency pairs, as well as an abundance of trading tools.

The CryptoKG tokenized asset futures exchange will enable you to trade securely, transparently and profitably. We meet all the stated standards, and we are a unique resource that will make it possible to trade cryptocurrency. **conclusions**

It is not difficult to identify the problems of most cryptocurrency platforms. But the main thing is the ability to identify them all and create a platform that will meet all customer requests, their desires, which will provide the most open and honest service to customers, and also, which will do everything that is necessary to leave their funds and personal data in safety. And CryptoKG is such a platform.

2. CryptoKG ecosystem

CryptoKG

This is an exchange that fights absolutely all of these problems, provides each client with access to his personal account and account, and makes it possible to trade profitably and transparently.

CryptoKG

This is a whole system of tokenized assets of a new generation, which makes it possible to integrate cryptocurrency into strengthening the tokenized economy, and allows you to introduce crypto-money into this very economy. This platform allows users to store, exchange, trade cryptocurrency without worrying about its security, and practically without colliding with various technology barriers.

Our mission

This is providing investors with access to cryptocurrency trading, with the ability to minimize potential losses. It is the facts that are important to us, not various speculations with the purchase of predictable companies with high income with different discounts on intrinsic value.

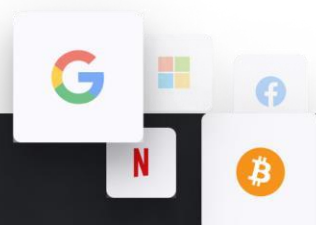

CryptoKG is freedom for traders that does not limit your choice.

Company Team

The CryptoKG exchange is a platform registered in the USA. The main office is located in London. More than 5 thousand clients have already gained access to more than 300 tools on the site, which include both cryptocurrencies and tokenized assets (stocks, commodities, bonds). We have laid a solid foundation that will drive rapid growth and expansion of functionality. Our main goal is to create a competitive environment for business development, and create a significant advantage over most other exchanges on the market. Our strong qualities are the key to retaining a large number of active customers and acquiring new ones.

CryptoKG is focused on quality support, which aims not only to solve possible difficulties, but also to contribute in every possible way to the financial growth of clients. Feedback of the resource with users is the reason why our active users appreciate us.

Our specialists are professionals in the world of investments who regularly monitor the current offers on the market in order to provide users with the opportunity to trade on current profitable positions. We always strive for various innovative solutions that cannot be found on other exchanges. And our main goal

is to maximize the markets available to clients so that they can trade efficiently, profitably, and fully comply with all necessary security standards and legal requirements.

CryptoKG values

Reliability. Increased security is one of our top priorities so that users can trade without worrying about their funds and personal data.

Efficiency. Regular instructing clients is the key to successful trading and full implementation of the tools presented on the site.

Purposefulness. CryptoKG is a company that employs traders, investors, programmers and analysts who understand that failures can always happen, but it is important to always look towards achievements. We focus on achieving a goal that includes maximum profit for our clients.

3. CryptoKG tokenized asset futures platform

CryptoKG is a professional exchange for trading tokens that allows you to profit from the dynamics of prices for various assets, be it stocks, indices, cryptocurrencies. Traders can use their cryptocurrency savings to trade.

We use banking procedures, liquidity, delivery, which helps us to operate as a platform for trading financial instruments based on cryptocurrency. To provide the platform with optimal properties, characteristics, and risk control systems, we have established relationships with large banks, thanks to which clients are able to receive high quality order execution.

And we continue to optimize our resources to provide you with high-quality and reliable service, and successful buying and selling was carried out even within the limits of increased volatility.

CryptoKG Review

Our platform has a wide range of different tools that will be useful not only for experienced traders, but also for beginners in this area. The main page contains all the necessary tabs that allow you to work with the site manually. The main page also contains a graph that displays the dynamics of prices for current assets. The very same process of buying and selling is carried out by using two buttons: "Buy", "Sell".

The main feature of the exchange is to provide the widest possible range of markets. Basically, many exchanges offer users trading based on cryptocurrency assets, which include the classic Ethereum, Bitcoin.

We suggest that you trade based on one wallet, which is displayed in BTC, or USDT. You can transact based on shares that are listed and traded on exchanges in North America, Europe and England. And you can trade not only cryptocurrency, but also using tokenized assets, which include commodities, stocks, stock indices.

Blockchain technologies allow CryptoKG to combine access to different markets, which allows it to profit from any trends that may form in the markets.

The account can be either in bitcoins or in a teaser (USDT), which is a stablecoin pegged to the US dollar. This means that buying stocks with USDT gives you nearly the same dollar value of the stock. This makes it easier to navigate the purchase.

Tokenized assets

The main advantage of the token is the transparency of transactions with it, as well as the fact that the transactions that are carried out with its help are as fast as possible. And low commissions are a welcome addition.

Risk-free deal

Risk-free transactions are an innovation that replaces boring demo accounts. The bottom line is that the trader has the ability to write off a negative financial result. The type of account on CryptoKG makes it possible to get more bonuses and benefits from using this type of transaction. Novice users can use these deals in order to better navigate both the functionality of the site and the functioning of the markets.

Such transactions are suitable for trading on the news, because news is regular, however, it is associated with quite significant price fluctuations. Opening a position on the eve of the news release will be an excellent option for implementing a risk-free trade, which will be a win-win option. Firstly, it will give you the opportunity to avoid risks if the price moves against expectations and you do not lose money. Secondly, the successful outcome of the transaction will significantly increase your investment.

CryptoKG advantages:

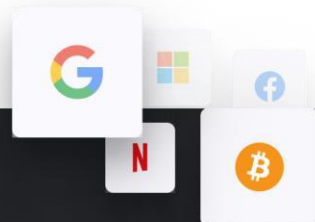

- European license;
- High safety standards;
- Transparent functioning of the platform;
- High-quality technical support work;
- A team of experienced analysts who regularly provide information on current market developments;
- Simple interface for traders, regardless of their experience;
- Leverage, which ranges from 1: 2, depending on the selected instrument; ● Risk-free transactions.

All of these bonuses allow you to use CryptoKG with the maximum benefit for traders. Such working conditions allow not only to make transactions quickly and conveniently, but also to minimize any risks associated with trading in tokenized assets.

Anti-money laundering

The site operates in accordance with the AML / KYC policy, which does not apply to the following procedures:

1. Examination.
2. Correspondence.
3. Monitoring user transactions.

4. Risk assessments.

CryptoKG reserves the right to collect and request up-to-date information about the user for further identification. All data is protected. All transactions on the site are monitored in order to identify potential suspicious user activity and to analyze the risks associated with transactions.

Commissions

The site has a number of commissions that a user can meet:

- Spread

This type of commission refers to the difference between the buying and selling prices of assets. As soon as the transaction is opened, the spread is written off. Different instruments have different spread values. Several factors affect the size of the commission, but the most significant is the liquidity of the instrument. Popular instruments have a much lower commission than the rarer ones. The second factor is market volatility.

- Night swap

Swap is the percentage that the trader is required to pay for those positions that are held overnight. Such payment is required only in cases where

- Inaction fee

If the account is inactive for more than 90 days, then the user will be charged an account maintenance and regulation fee.

- Conversion fee

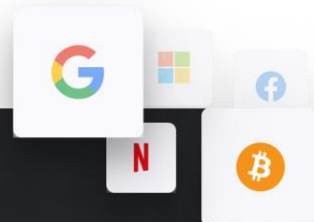

If the transaction is made with a currency that does not match the user's account, a conversion fee will be charged. Such a commission is always deducted when it comes to currency conversion.

4. CryptoKG as the Key to Changing the Investment World

New financial players mean a complete change in the economy.

Unlike the command economy, modern financial markets can show the difference by decentralizing decision making. If the company's share price is higher, then the society is much more loyal to its subsequent actions. The rise in stock prices is capital in the financial market, which is much cheaper. This opens up access to more research and development and increases employment.

Consumers get better results. Decentralization in economic decision making allows for a free and open economy, which has been successful in the last century.

The fact of the emergence of blockchain and smart contracts has opened up the possibility of exchanging assets much more securely, moving away from the restrictions that financial markets had previously provided. However, it was not possible for crypto investors to use their tokens in full to gain access to the established financial markets. And we are changing this position.

CryptoKG, being a futures exchange for trading tokenized assets, makes it possible to trade classic assets using cryptocurrency, because it believes in the potential for the development of the world economy using blockchain technologies. Every investor has the opportunity to access the global financial markets and can create a diversified investment portfolio.

What are the disadvantages of the current financial system?

Crypto investors, until now, have not had the opportunity to trade their assets on the global financial markets. Cryptocurrencies were not available in order to use them as full-fledged elements for trading, and converting to fiat only increased risks and costs. Investors do not want to convert their currency into fiat money, but want to invest their cryptocurrencies in various valuable assets.

The main problem is that the markets for crypto investors are limited, and they do not have the opportunity to invest in precious metals, stocks, raw materials, indices. The assets of crypto investors have high potential, but are used for speculation in ICOs, which is associated with high risks.

CryptoKG features:

- Leverage from 1: 1 to 1:20;
- Scaling the matching mechanism;
- The speed of work is more than 50,000,000 operations per second; ● Access to over 10,000 global financial assets in just 2 years.

Legality:

- CryptoKG is a legal, transparent and legitimate project;
- CryptoKG is regulated under European law;
- Using AML / KYC

Our strategy:

CryptoKG earns solely on the commission of using the services provided by the exchange. Investors, in turn, receive high quality service and amazing service for investors of all levels.

Business model

Like most other exchanges, we receive our income from the commission for the services provided. We adhere to a policy of complete transparency. CryptoKG aims to provide conditions for both experienced investors and novice users who have just decided to start their investment journey.

CryptoKG Rewards

Trading without leverage involves charging a fee of 0.2% of the transaction volume. This amounts to 20 USDT.

The commission for leveraged trading is:

- 0.05% for shares;
- 0.0125% for indices or commodities; • 0.1% for cryptocurrencies.

Leverage makes it impossible to trade bonds. For trading in non-leveraged bonds for tokens that correspond to these bonds, the commission is 0.05%. The storage fee for exchange-traded assets is 0.5%, or 50 USDT per year. Leveraged trading and withdrawal of tokens are free of charge.

Security

CryptoKG adheres to the norms and laws of the European Union, which allows you to create the most open, transparent and safe platform for investors.

Compliance with legislation:

Safety is one of the most important criteria that we value. When choosing a trading platform, investors also pay attention to this very fact. CryptoKG is a global trading platform that not only allows you to get uninterrupted access to the system, but also makes it possible to trade safely and reliably. Accounts are protected by two-factor authentication, and require constant user confirmation, especially when it comes to withdrawing or replenishing a personal account, and also, when using the API-key to use the exchange functionality.

CryptoKG keeps a record of IP addresses and implements the requirement to protect user accounts. Payment system security requirements protect the processes of depositing and withdrawing funds from your account. And such protection still allows you to create an intuitive and comfortable interface for users.

Strict safety standards are our everything. Therefore, we work in accordance with the stringent AML / CTF requirements.

Technologies

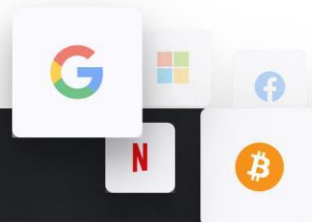

The best technology is the ability to create successful financial systems.

The CryptoKG exchange is based on the best technologies that have been created and developed by professionals in the field of creating trading platforms.

Many cryptocurrencies are developed by professionals who have technological experience but lack sufficient financial experience.

The CryptoKG exchange, unlike its competitors, makes it possible to take advantage of advanced technologies that are the foundation of almost every element of the site's functionality, from smart contracts to managing trade servers.

Flexible scalability of the cloud system makes it possible to get timely and uninterrupted access to the site, even if there is an influx of new customers or an increase in trading activity.

The platform is completely user-friendly and understandable for every user and makes it possible to get the price they will receive even when trading in traditional markets with sufficient liquidity. Artificial liquidity is a problem of many marketplaces, which prevents users from gaining access to transactions. And we got rid of this problem.

CryptoKG has a long history of creating traditional exchanges to fulfill investors' orders.

5. Platform tools

Indexes

Trading indices depend on the current performance of the stock market. Trading indices with CryptoKG allows for regular access to these assets. Our innovative technologies make it possible to conduct large, successful transactions. Also, indices can display the performance of a group of stocks, which will give you the ability to manage them, taking into account the current indicators of the stock market, which you cannot provide with individual stocks.

Stock indices are considered a much less risky investment than trading individual stocks. The risk is spread across the entire stock market, not across the stock of one particular company. This makes it possible to neutralize the risk caused by most of the factors affecting the stock.

CryptoKG gives you access to global indices worldwide. Any trader has the opportunity to take part in world trading.

Cooperation with CryptoKG gives you the ability to quickly and easily operate your assets. Trade indices from all over the world to achieve success and tangible income.

Commodities

Commodity trading is literally the buying and selling of sugar, coffee, cotton. Even agricultural products fit into this category.

Trading goods of this category using cryptocurrency is an innovative opportunity that may become commonplace for traders in the future.

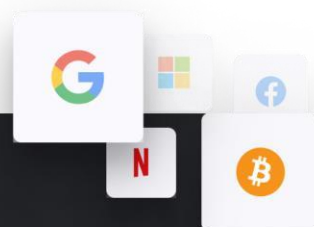

Commodity trading will be much more successful with CryptoKG.

Our research on the commodity market as well as regular analysts allows us to attract more and more active users. Trading in commodities can have certain difficulties, which depend on the size and choice of exchanges. But cryptocurrency transactions make trading much easier. Leveraged cryptocurrency minimizes various trading costs.

Precious metals

Precious metals are a collection of assets that include metallic chemical elements that are of high value.

CryptoKG gives you the opportunity to trade silver, gold, platinum online, literally without leaving your device. We are able to help our clients by providing regular up-to-date reports on the market situation, as well as analyzing all changes in the metals market.

CryptoKG is a highly customizable marketplace that delivers the very best trading experience. Clients have access to automated trading solutions. Working with us, you get access to quotes for all precious metals on the market, which will allow you to diversify your investment portfolio.

Energy resources

Investing in energy companies with CryptoKG is a sure way to make quick profits.

Trade in energy resources, energy sources that cannot be renewed in any way, is one of the most popular and popular positions on the market. Coal, gas, oil - all of these items are widely popular.

Energy goods are assets, which are goods that consist of energy sources.

The price of these products is an economic marker for traders, governments, analysts, especially considering the relationship between energy consumption and economic growth. Oil is still a widely used form of energy.

And CryptoKG lets you learn more about energy trading.

A marketplace that is intuitive and easy to use is the right step towards gaining access to safe and profitable energy trading. We will help you invest wisely in various companies in order not only to diversify your portfolio, but also to give you the opportunity to earn profitable.

Cryptocurrencies

CryptoKG is an exchange that allows you to trade tokenized assets in the most profitable and simple way using advanced technologies. Trading with us is as safe as possible.

Cryptocurrency is a digital asset that has no physical expression. One "coin" is a unit of any cryptocurrency. However, such a currency is completely protected from any fraud and falsification, because, in fact, it is encrypted information that cannot be copied in any way. Cryptocurrency is not subject to central banks and other government agencies. They use blockchain technology.

Cryptocurrency trading allows you to perform operations that will allow you to receive profit from both its growth and decline. Leverage will allow you to conduct transactions even without cryptocurrency.

6. Types of accounts

7. CryptoKG - service development

Our goal

Become a platform for next-generation digital assets that will be able to combine traditional finance and an innovative fast-growing digital economy. Our main mission is to offer our clients attractive terms of cooperation, while maintaining the simplicity of the exchange's functionality and staying on top of innovative

trends. We are also interested in creating a next generation financial ecosystem based on the interaction of blockchain technologies and assets.

THE ACTIVITIES OF THE COMPANY CryptoKG AIMED AT:

- Exchange opportunities between fiat;
- Digital assets and cryptocurrencies with greater intensity;
- Providing customers with a high-quality exchange that can withstand colossal loads and function at optimal performance even during peak periods;
- A guaranteed reliable platform for the provision of new promising projects and their communities;
- Contribution to the development and growth of the industry;
- Crypto assets and blockchains

FUTURE EXCHANGE DEVELOPMENTS:

- Give users the ability to export their wallet private keys;
- Expansion of the functionality of the trading exchange;
- Limit orders, stop loss, in-depth chart;
- Mobile applications supported by iOS / Android;
- The presence of a decentralized exchange application will allow the site to work properly even in cases of interruption of the exchange site.

FUTURE MARKETING STRATEGIES

Planned marketing efforts include but are not limited to the following:

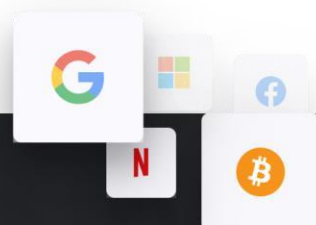

- Media Appearances, Campaigns, Social Media, Interviews, AMA, Meetings, Trade Competitions, Aerial Events, Continued Marketing Campaigns.

8. Licenses

Regulation by the European Union

CryptoKG is a tokenized asset provider licensed by the EU to create and maintain digital wallets, conduct cryptocurrency exchange operations. Our exchange regulations operate in accordance with strict EU Directives. The tokenized asset futures market CryptoKG is also operated by the Estonian EFSA. This

Find out why millions of users from over 140 countries are trading with CryptoKG

Estonian regulator is one of the companies that give preference not to bans, but to the development of rules for the circulation of digital capital and conditions for the development of the cryptocurrency industry. Estonia is one of the first European countries to legalize crypto activities. Since March 2019, Estonia has been named the best country for doing blockchain business.

9. Risks and disclaimer

Risks

By becoming a CryptoKG customer, you assume the following risks:

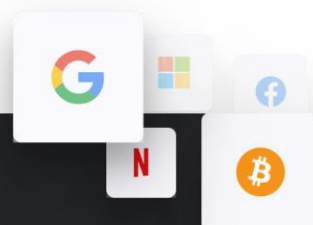

- You make the choice to perform transactions with tokenized assets on CryptoKG, which are highrisk investment instruments that are not suitable for all investors;
- This White Paper provides information on the risks associated with tokenized exchange-traded assets, however, it does not indicate the full scope of risks or the relationship between personal circumstances and the risks of the client. If in doubt, the client should seek professional advice;
- Before concluding an agreement and starting trading relations, it is necessary to understand the risks associated with the use of this site and tokenized exchange-traded assets. If a client decides to enter into a trade relationship with us, it is imperative that he is aware of the risk. Adequate financial resources are needed to bear the likely risks. It is also important to carefully monitor the transactions made and the risks that are associated with them.

BIG LOSSES

Investing with leverage means increasing your potential gains and losses. The client can incur significant losses if the price moves in the opposite direction relative to the client's expectations. To avoid big losses, we recommend using the risk management tools offered by CryptoKG. Please note: you will not be able to lose more of your account balance.

Leveraging tokenized exchange-traded assets is not a long-term investment option.

If a client holds a tokenized exchange asset for a long time, then the associated costs may increase. In this case, it may be more profitable to buy instead an underlying asset or a tokenized exchange-traded asset without leverage, which can be transferred to the client's virtual wallet identifier.

LACK OF RIGHTS TO BASIC ASSETS

Tokenized exchange-traded assets do not grant any rights to the underlying assets.

It is necessary to invest only in those funds that you can afford to lose.

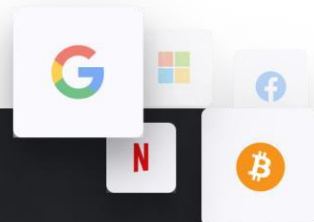

The client should not invest in tokenized exchange-traded assets funds that he cannot afford to lose. Investing in tokenized exchange-traded assets is a high degree of risk for an investor and, due to fluctuations in the value of assets, there is a possibility of incurring losses.

CORRESPONDENCE

Any decisions about registering an account and buying tokenized exchange-traded assets, as well as whether the client understands the risks that he is taking. We have the right to request information about your financial income and assets. To assess the client's risks, we will not track the correspondence of the amounts that have been invested in CryptoKG, the information provided by the client. Only the client himself has to assess whether his financial resources are sufficient, and what degree of risk he is ready to take on.

POTENTIAL RISKS

There is a possibility of losing all funds deposited for operations on CryptoKG, but you will not be able to lose more than your account balance. Before trading, there must be sufficient funds in the account to make the "initial size" of the leverage prepayment. For this transaction to "remain valid", make sure that the amount of funds in your account exceeds the required amount of "supported" prepayment. The initial prepayment rate differs depending on the type of tokenized exchange-traded assets. The amount required to complete a specific transaction is indicated on the CryptoKG website. Leveraged trading can work for you as well as against you: small price movements in your favor will result in high profits, and small price movements in the opposite direction will result in significant losses. Trading tokenized assets with leverage means that by making the first prepayment, you significantly increase the possible financial result from a specific transaction. Using leverage will increase the size of your trade and the potential profit as well as the potential loss will also increase. It is important to closely and actively monitor your own active leverage in order to manage the risk of large losses. For example, a leverage of 10% (or 1:10) means that when the price of the underlying asset changes by 1%, the value of the purchased exchange-traded assets in relation to the prepayment amount will change by 10%. Each instrument has a set leverage specified in its details. It is important to remember that with all your funds invested, you will be less able to withstand market volatility more than investing a fraction of your funds. Make sure that the amount in your even entry exceeds the

amount of the supported prepayment in order to keep the leverage active. This is necessary if the price is moving against you and additional funds need to be deposited in the shortest possible time to keep the leverage operation active. Otherwise, we have every right to terminate your leverage in whole or in part. The risk of losses incurred by you in any amount lies solely with you. In accordance with the agreement, we have the right, at our sole discretion, to make a demand for the deposit of additional funds to keep the leverage operation active, which you must immediately complete. Otherwise, we have every right to terminate your leverage in whole or in part. If you have not set an absolute limit on your losses using the Guaranteed Stop setting, negative market movements can contribute to the loss of your entire account balance. Guaranteed Stop is not offered for every instrument, however, there are other risk management mechanisms, for example, by setting conditions for orders "Close on loss" or "Close on profit" on your account, which help to reduce losses. Please note that the effectiveness of using the mechanisms "Close on loss" and "Close on profit" is not guaranteed if the quote is very abruptly changed. which help to reduce losses. Please note that the effectiveness of using the mechanisms "Close on loss" and "Close on profit" is not guaranteed if the quote is very abruptly changed. which help to reduce losses. Please note that the effectiveness of using the mechanisms "Close on loss" and "Close on profit" is not guaranteed if the quote is very abruptly changed.

NOT SUITABLE AS A SOURCE OF STABLE INCOME

In most cases, tokenized exchange-traded assets are not suitable for an investor looking for a stable income from their own investments. This is due to the fact that the profitability of these investments has the property of significantly fluctuating in value in terms of fiat units.

MARKET VIBRATIONS

It is important to understand and take into account the risks associated with the sale of tokenized exchangetraded assets, since fluctuations in the price of the underlying market will affect the profitability of trading and the result of investments. Slippage occurs when the market moves unexpectedly in any direction and is the difference between the expected trade price and the actual execution price. In this case, the price "slips" when the market "transitions" from one state to another. This applies to both favorable and unfavorable price changes and can cause loss (negative price slippage) or profit (positive price slippage). Trading in tokenized exchange-traded assets is an option for users who fully understand the risks and have experience in investing in the financial markets. If you are not sure,

OPERATIONAL RISKS

Operational risks due to the use of CryptoKG on your computer or smartphone are inherent in any transaction with tokenized exchange-traded assets. Violations in the operational processes of the CryptoKG platform, such as communications, laptops, external factors, can cause delays in the execution and settlement of transactions. CryptoKG is not responsible for any shortcomings in CryptoKG's operational processes, except when they appeared due to the fault of CryptoKG.

10. Frequently asked questions

What is CryptoKG?

CryptoKG is a platform for the provider of tokenizing assets of Coinplas Limited, a universal exchange providing a full range of services using cryptocurrencies. With CryptoKG, you can place long-term investments, carry out exchange operations of cryptoassets, and implement short-term high-yield trades.

How is the exchange going?

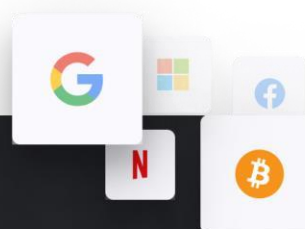

1. Account registration. Click the "open an account" button on our CryptoKG exchange and enter the data in the standard form, indicating your full name, e-mail, phone number. This is a free procedure that will instantly open an account.
2. Account verification. To maintain the security of client accounts and in accordance with current EU legislation, it is mandatory to provide identity documents.
3. Exchange. After verifying your identity, you will be able to conduct exchanges. Using your bank card, you need to make a deposit in fiat money, having received Bitcoin or Tether into your account. Having BTC or USDT on your account, you can use them as a means of accumulation, keeping them for a long time, buy and sell available tokenized assets, and exchange cryptocurrencies.

What are the opening hours?

Around the clock - the system works in automatic mode.

How quickly will I receive BTC / USDT to my account?

It depends on whether it will be the first or the second exchange. If your account has just been verified, then on the first exchange a new wallet is created, which must be approved by the blockchain system. After that,

the wallet will be available for transactions. In CryptoKG, this process often takes up to 30 minutes. If the exchange is repeated, then the process will happen quickly.

Is it reliable?

Reliable, as we are licensed by the European financial authorities and value the reputation of the exchange and the brand.

What are the limitations?

The minimum exchange amount is 500 USDT.

What is the commission?

When funding accounts with CryptoKG, no commission is charged. But the commission may be charged by your bank.

What is the exchange rate?

The exchange takes place at the current rate at the time the request enters the exchange system.

Is it possible to do without documents?

No. Obligatory verification of accounts occurs in accordance with the requirements of EU legislation. Your data is confidential, they will always be inaccessible to third parties.

Transparent,

Legal, Reliable.

CryptoKG is a new cryptocurrency reality.
